

Sujay Mishra

Software Engineer

Aspiring Software Engineer with a strong foundation in computer science, currently pursuing a BE in Computer Science and Engineering. Seeking an opportunity where I can leverage my programming skills, passion for product quality, and dedication to innovative software solutions to contribute to real-world projects and collaborate with global teams.

EDUCATION

Bachelor of Engineering-cse

Chandigarh University, Mohali

07/2024 - Present

CGPA-8.04

Higher Secondary Education (12th)

DAV Public School, Patna

06/2022 - 05/2024

percentage-76%

Secondary Education (10th)

DAV Public School, Patna

04/2011 - 05/2022

percentage-82%

PROJECT EXPERIENCE

Software Developer (Project)

AI-Driven Roster & Contract Optimization System

02/2026 - Present

Achievements/Tasks

- Built a machine learning system to predict IPL player performance for roster decisions.
- Developed metrics to identify undervalued and overpriced players.
- Implemented mathematical optimization for team composition under salary constraints.

Python Developer (Project)

Inventory Management System

10/2025 - Present

Achievements/Tasks

- Developed a Python application for tracking inventory and stock availability.
- Implemented CRUD operations using SQL database.
- Designed structured data handling for efficient inventory management.

ORGANIZATIONS

DroidLinX Club, Chandigarh University
(01/2026 - Present)

Member

Event Crew, Chandigarh University (12/2024 - Present)

Memeber

SKILLS

C/C++

Python

HTML

CSS

OOPS

DBMS

PERSONAL PROJECTS

AI-Driven Roster & Contract Optimization System

- ML-based prediction of IPL player performance for roster decision support.
- Computed **performance-salary value metrics** to detect undervalued and overpaid players.
- Mathematical optimization of squad composition under **budget and salary-cap constraints** with trade scenario simulation.

Inventory Management System (Python + DBMS)

- Python application for tracking product inventory and stock availability.
- Database operations enabling add, update, delete, and search of item records.
- Structured data handling using SQL for consistent inventory management.

IoT Emergency Alarm System (ESP8266 + MQTT)

- Real-time emergency alert system using ESP8266 microcontroller and MQTT communication protocol.
- Remote alarm activation through lightweight publish-subscribe messaging.
- Optimized device communication for stable connectivity and minimal response delay.

CERTIFICATES

IoT Devices — University of Illinois Urbana-Champaign (Coursera)

Certificate of green commitment

Data Analytics and Visualization job Simulation

ACHIEVEMENTS

Winner - @BuildX Hackathon (02/2026 - Present)
